Business Plan Presentation

2027

INTRODUCTION :

Indian automotive manufacturers, EV startups, and low-volume developers face a critical gap in independent brake-throttle safety. Software dependence and the high cost of in-house safety hardware create a need for an affordable, reliable solution enabling rapid fault intervention.

SOLUTION:

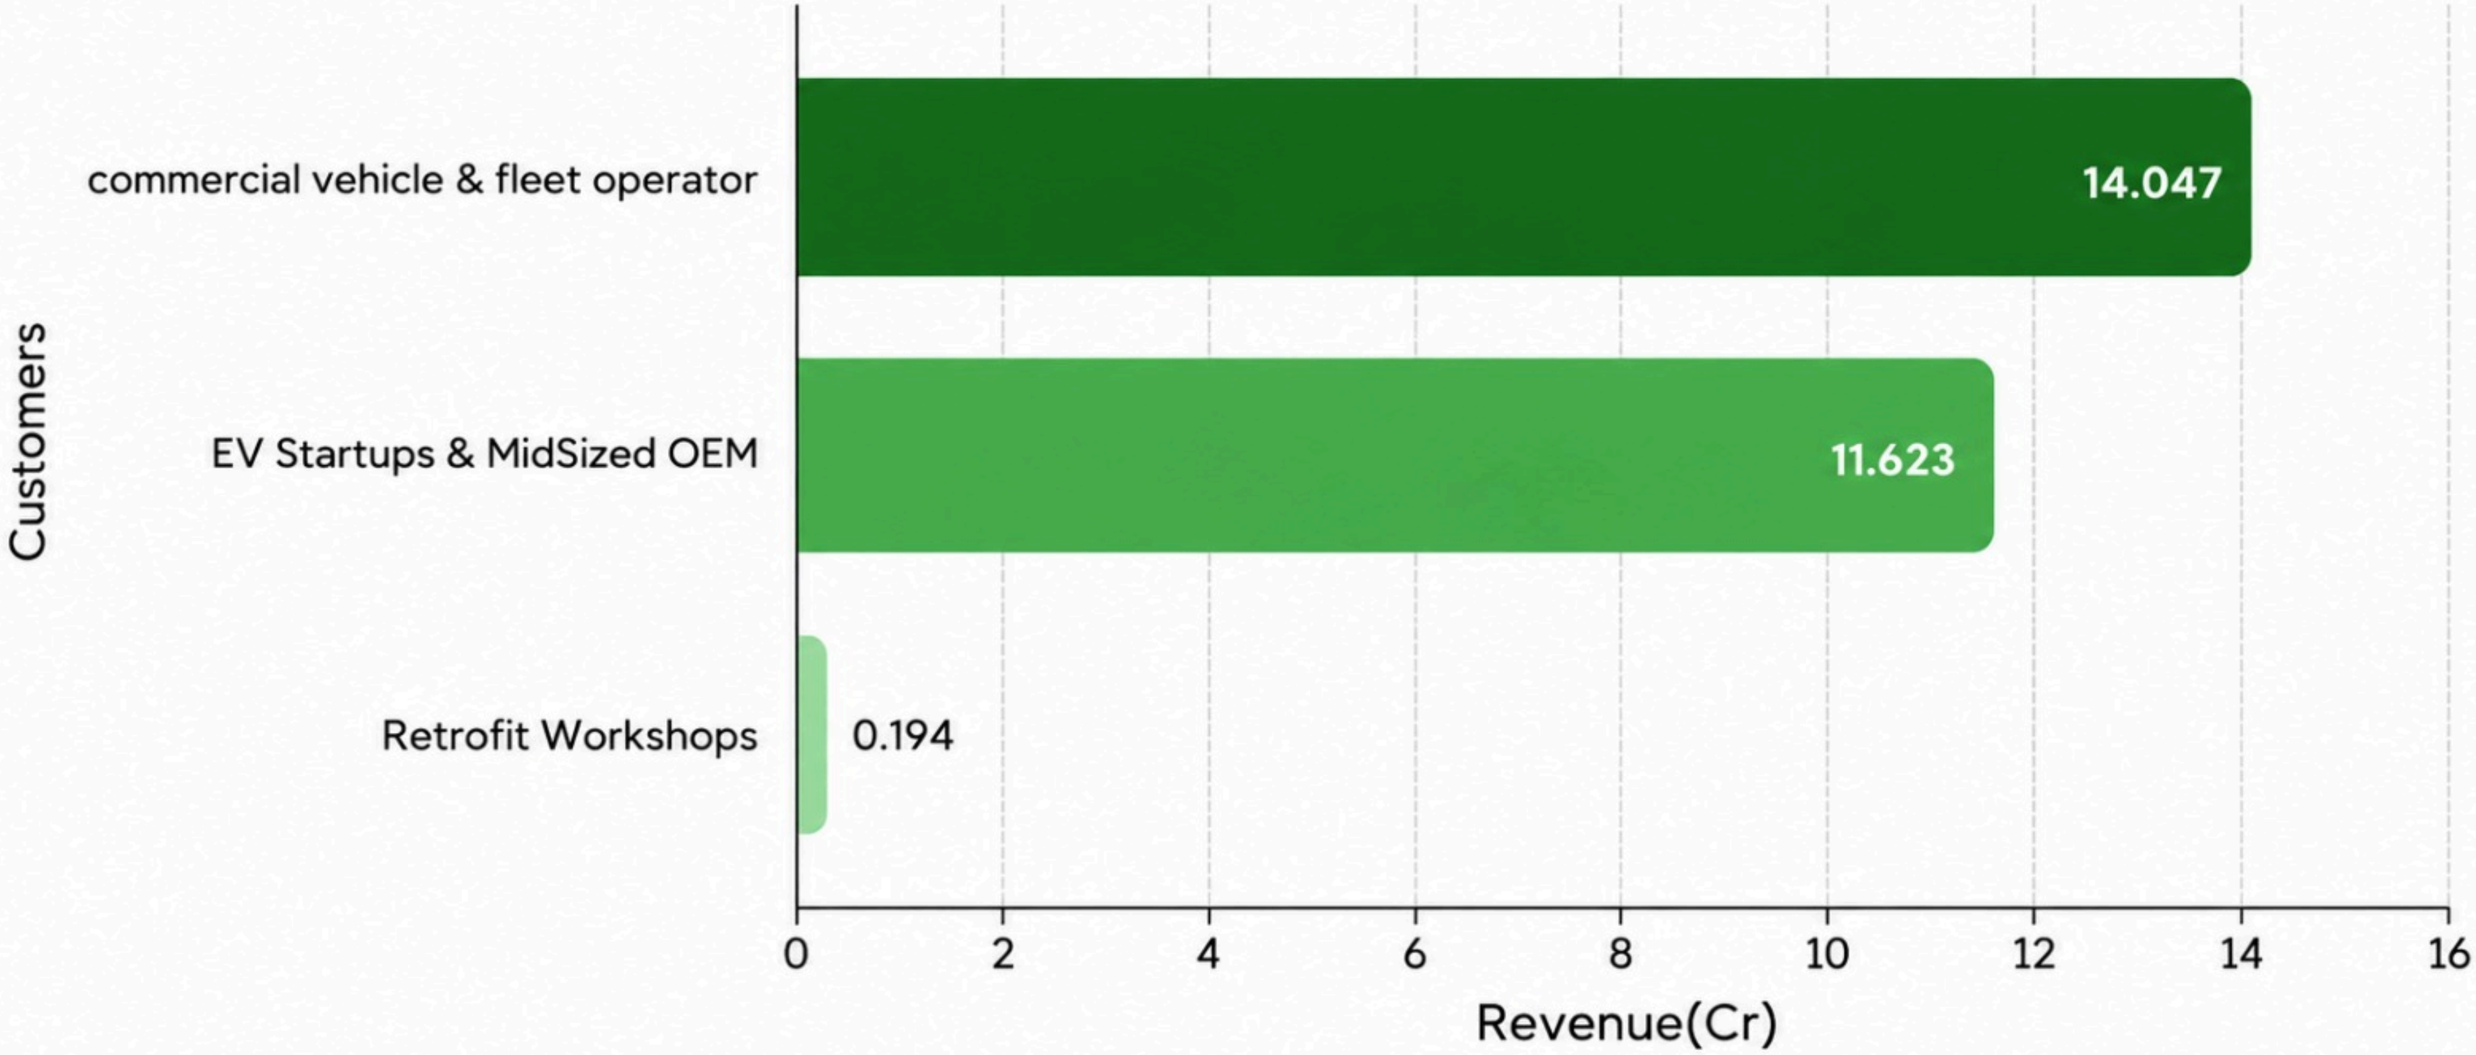
VishwaSafe is a hardware-based vehicle safety solution providing independent brake-throttle monitoring and rapid power intervention through a compact **0-5** V analog architecture. It offers an affordable, reliable, and easily integrable safety layer for modern vehicles.

Why VishwaSafe?

- No company in India currently provides an off-the-shelf analog BSPD
- One common platform supports multiple product tiers - LITE, PRO, and PRIME- allowing us to serve different vehicle requirements while scaling the same core technology.
- Plug-and-play integration with mechanical & hydraulic braking systems. Compatible across EV, ICE & hybrid platforms

ABOUT US

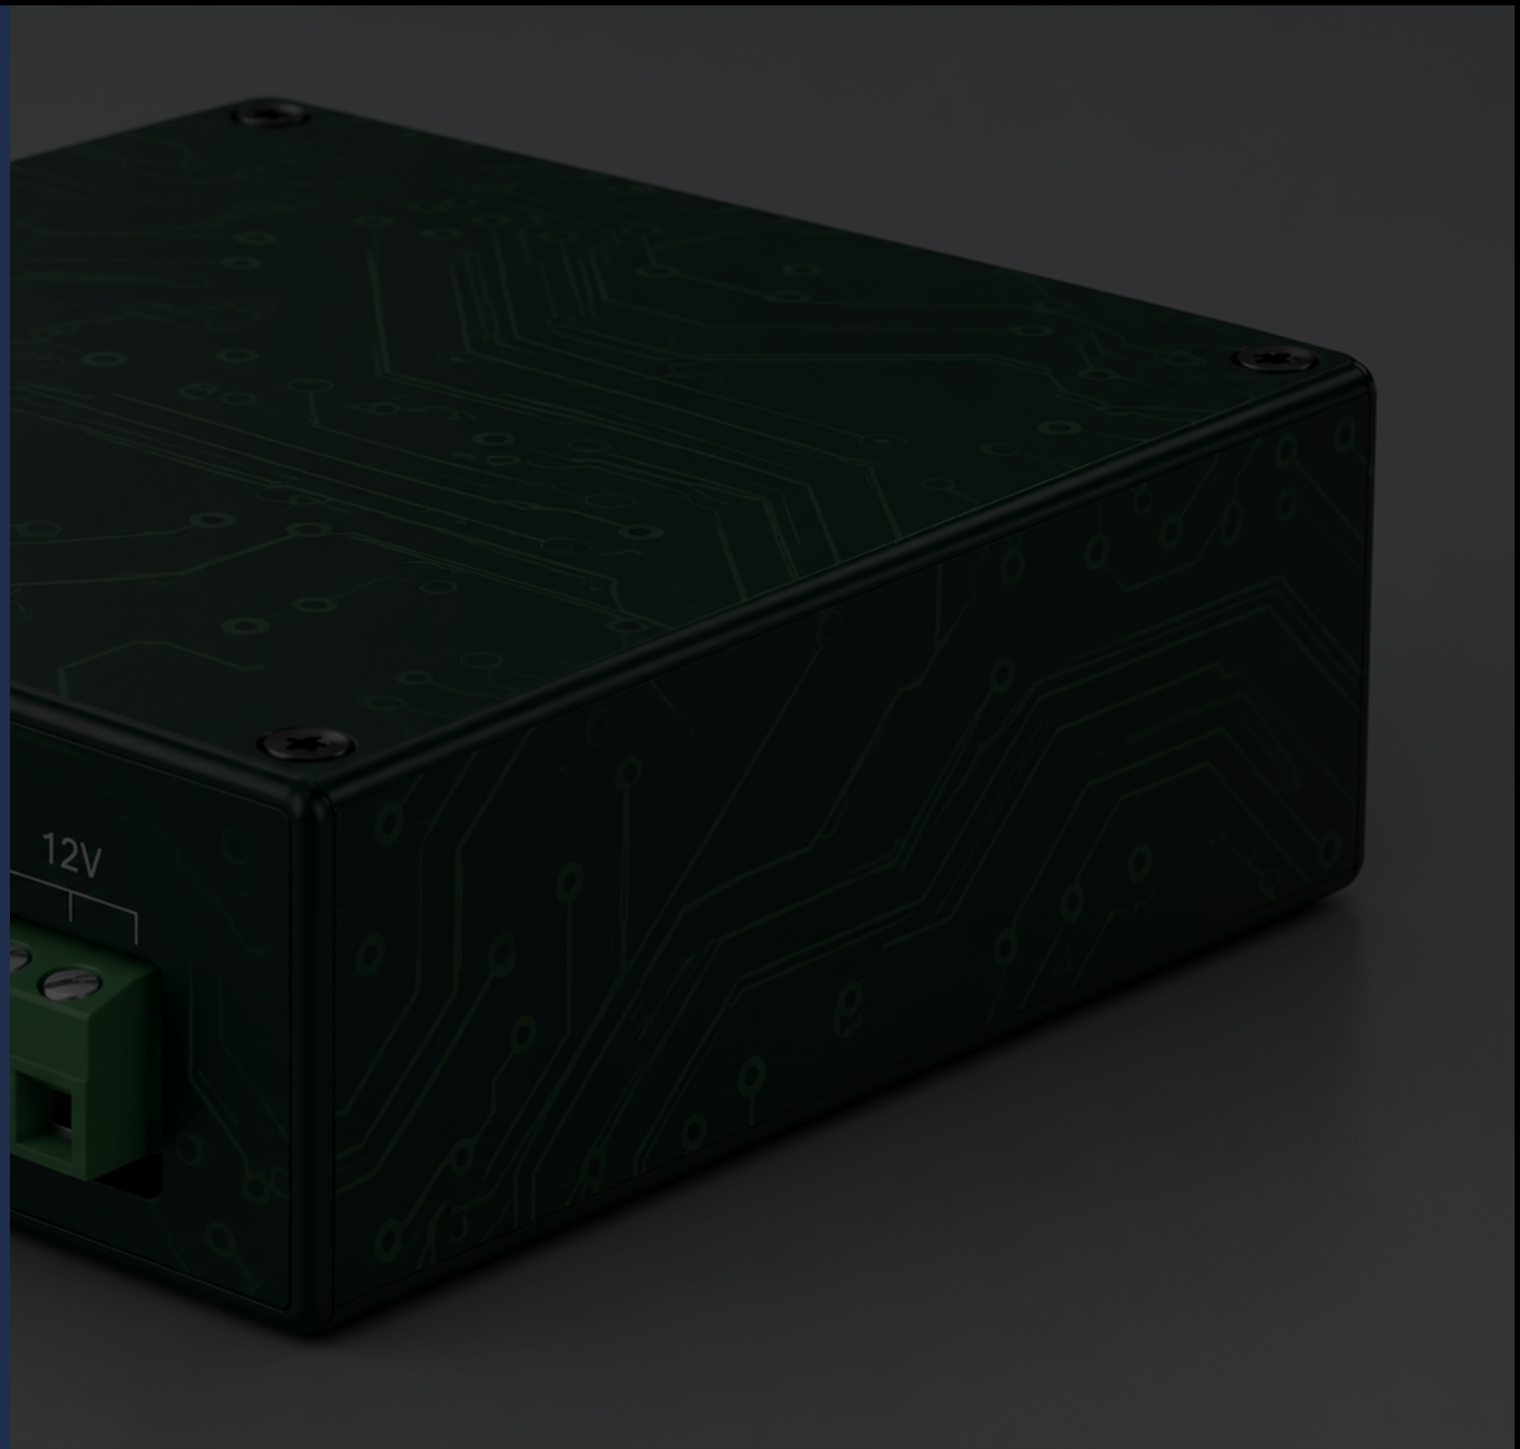
SERVICEABLE MARKET BREAKDOWN (FY 2030)



LITE Tier

- We provide essential brake-throttle monitoring that detects unsafe pedal combinations and triggers safety intervention when required.

- Our compact and affordable design makes safety protection easy to integrate, especially for retrofit applications and entry-level vehicles.



PRO Tier

- We add event logging to essential brake-throttle monitoring, capturing critical safety events for better traceability and accountability.

- Our enhanced system is designed for fleet and commercial applications, helping operators identify incidents, monitor system performance, and improve vehicle safety.

PRIME Tier

- We provide advanced brake-throttle monitoring with predictive sensor-health insights, enabling early identification of potential safety issues before they become critical.

- Our factory-grade solution delivers enhanced diagnostics and proactive safety monitoring, making it suitable for OEM integration and advanced commercial vehicle applications.

Retrofit Workshop

Commercial Vehicle & Fleet Operator

- Easy Integration: Compact design that integrates into existing vehicle systems with minimal modification, ideal for retrofit applications.

- Affordable Safety Upgrade: Adds independent brake-throttle monitoring and intervention to existing commercial vehicles without a complete system redesign.

- Practical Deployment: Simple installation enables workshops to upgrade vehicle safety quickly and cost-effectively.

Retrofit Workshop

Commercial Vehicle & Fleet Operator

EV Startups & Mid sized OEM

- Operational Safety: Designed to address brake-throttle conflicts in vehicles operating under demanding and varied driving conditions.

- Event Accountability: Records critical safety events to support incident review and driver accountability.

- Fleet-Wide Deployment: Enables standardized safety integration across multiple vehicles for consistent fleet-wide protection.

Commercial Vehicle & Fleet Operator

EV Startups & Mid Sized OEM

- Faster Development: Integrate a ready safety solution from prototype to production.
- Reduced Engineering Effort: Avoid the time and resources required to develop a dedicated system in-house.
- Scalable Integration: Adapt the same safety platform as vehicle production scales

Foundation & Validation

FY
2023 - 2024

FY
2025

FY
2026 - 2027

Goal:
Establish VishwaSafe as an independent vehicle safety solution and prepare for commercial entry.

Achievements:
Built the business foundation, defined target segments, and developed the product offering-progressing toward early market traction and revenue growth.

Achieving Break-even & Securing Investment

FY **2023 - 2024**

FY **2025**

FY **2026-2027**

FY **2028-2029**

Goal:
Achieve operational break-even and establish VishwaSafe as a financially sustainable business.

Achievements:
Expanded market traction and sales, reaching positive EBITDA and break-even in FY**2025**, while strengthening cash generation for the next growth phase.

FY
2023-2024

FY
2025

FY
2026-2027

FY
2028-2029

FY **2030**

Growth Capital & Expansion

Goal:
Deploy growth capital to scale VishwaSafe operations and market reach.

Execution:
Utilize the **₹1.30** Cr investment to strengthen working capital, certification, market expansion and vertical integration, while scaling operations and preparing for higher-volume sales.

FY **2025**

FY
2026-2027

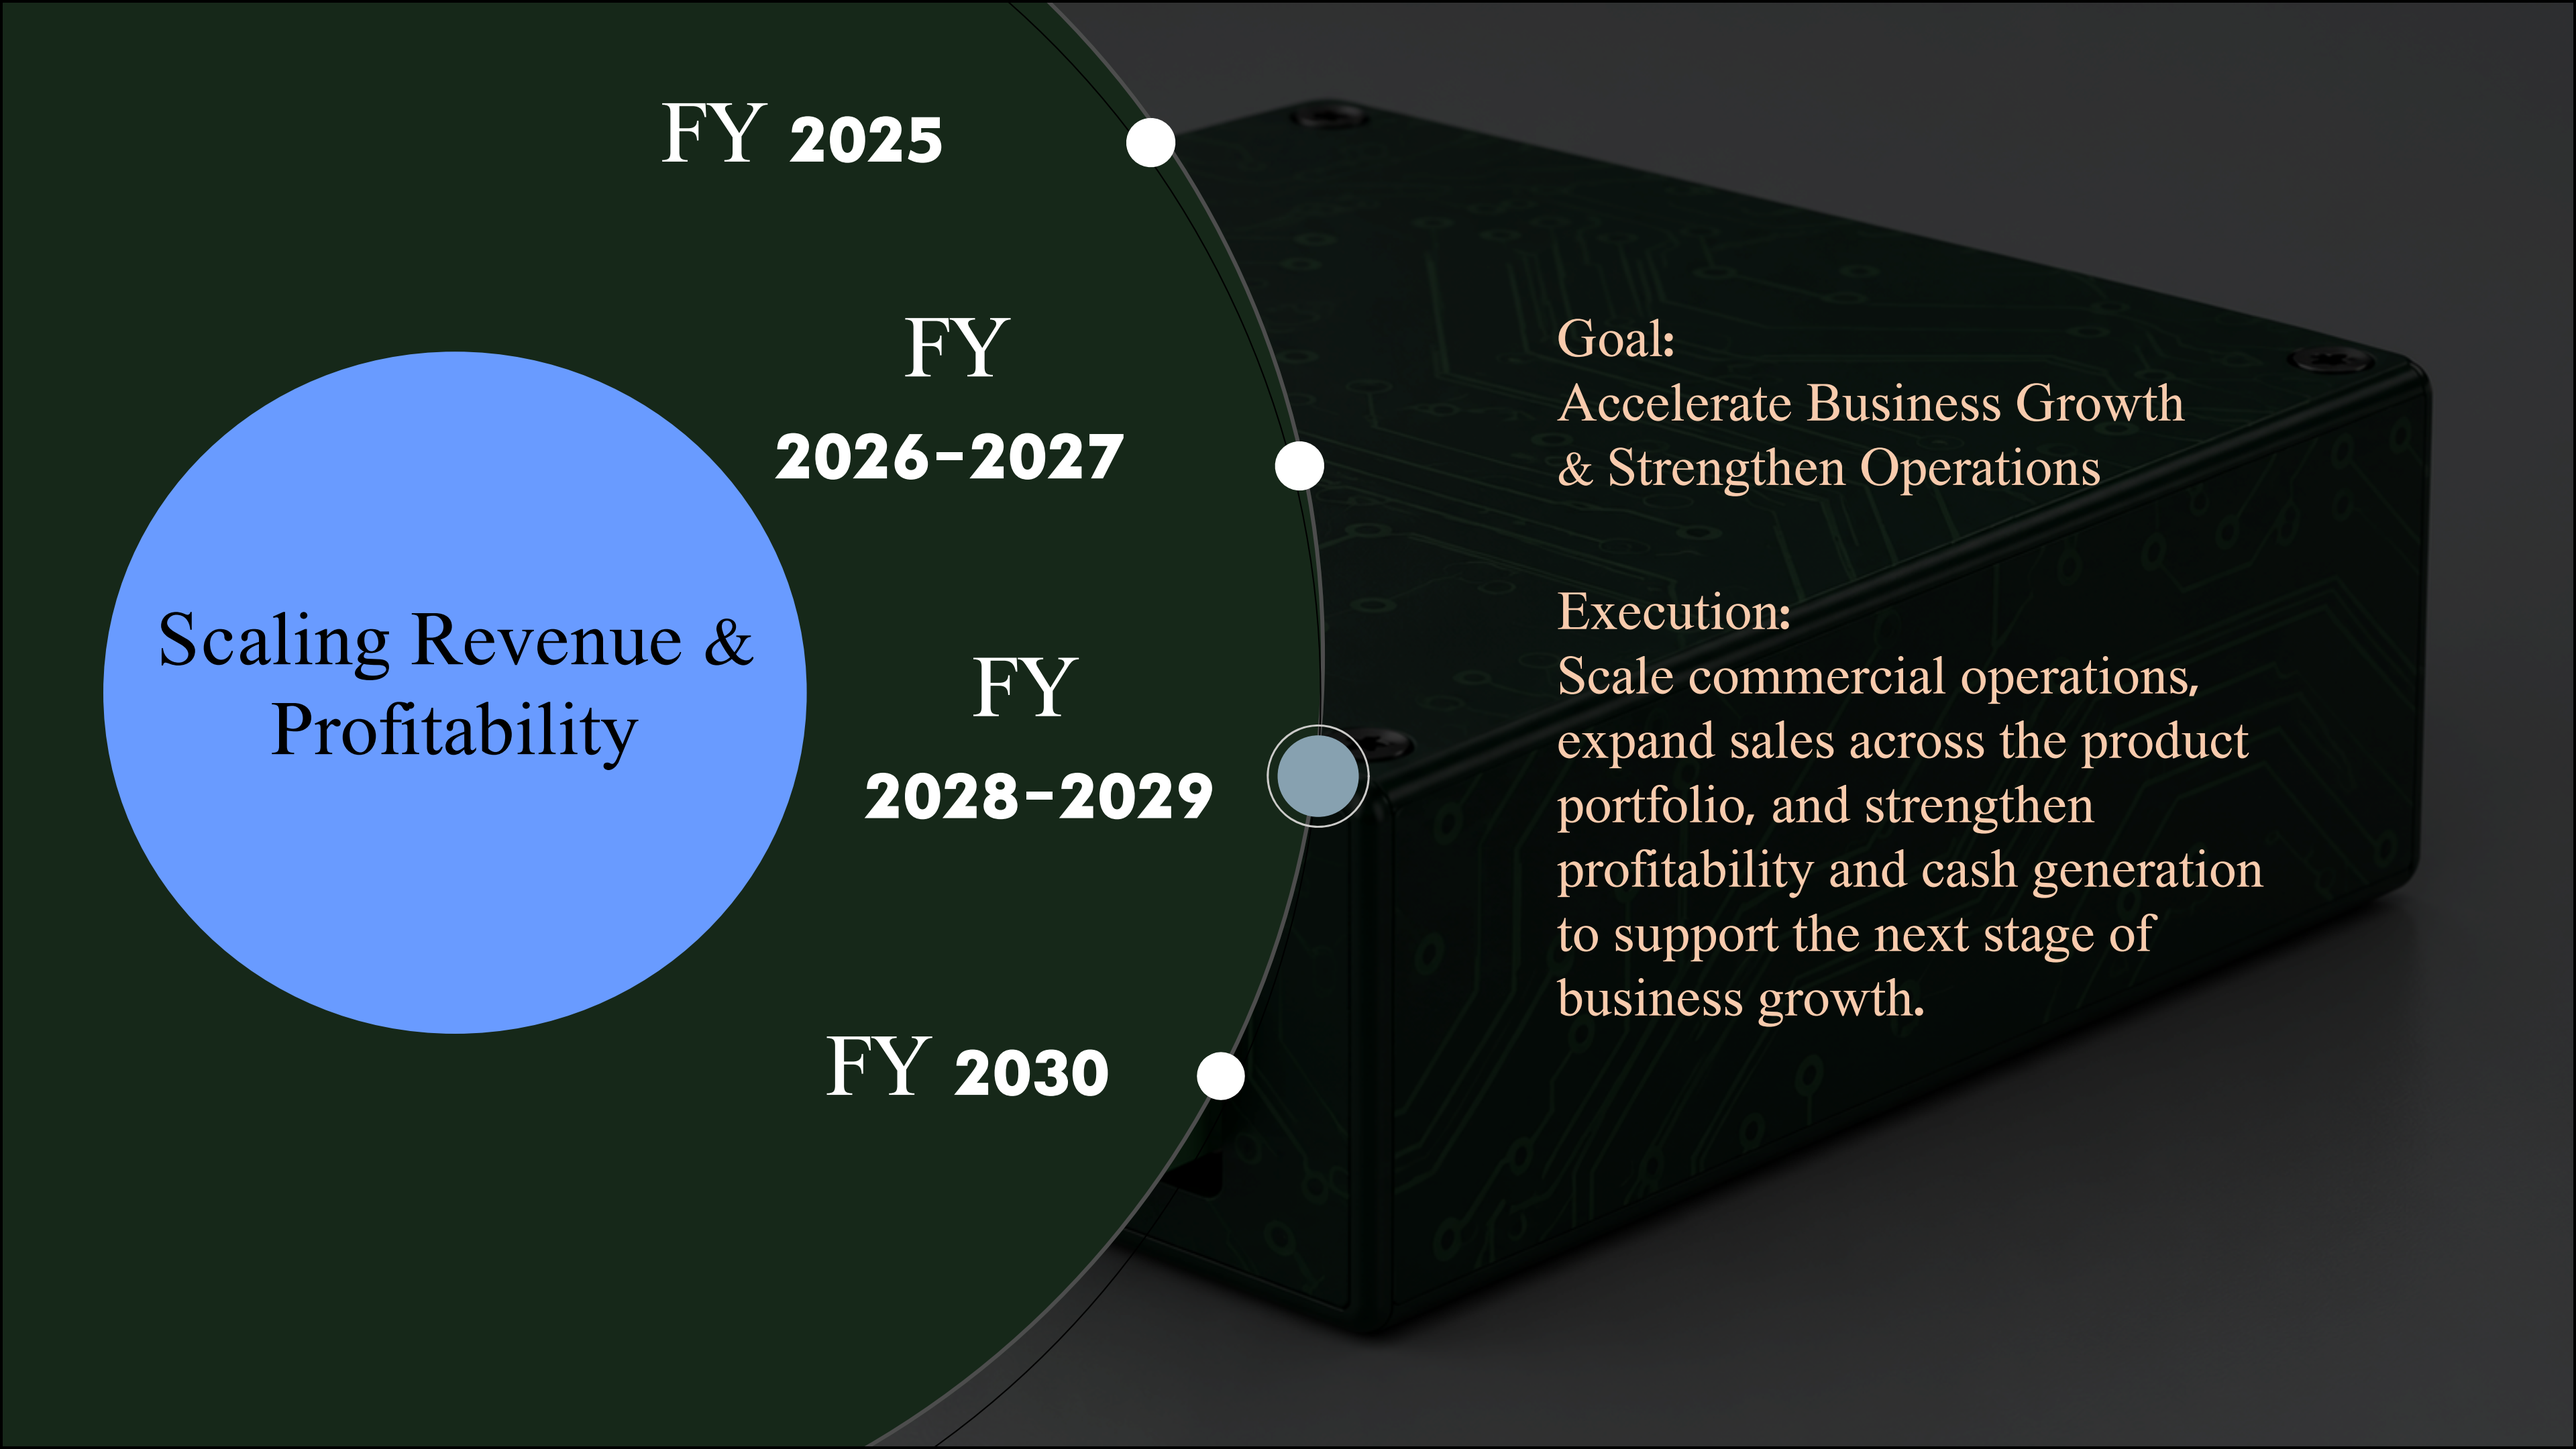
FY
2028-2029

FY **2030**

Scaling Revenue & Profitability

Goal:
Accelerate Business Growth & Strengthen Operations

Execution:
Scale commercial operations, expand sales across the product portfolio, and strengthen profitability and cash generation to support the next stage of business growth.

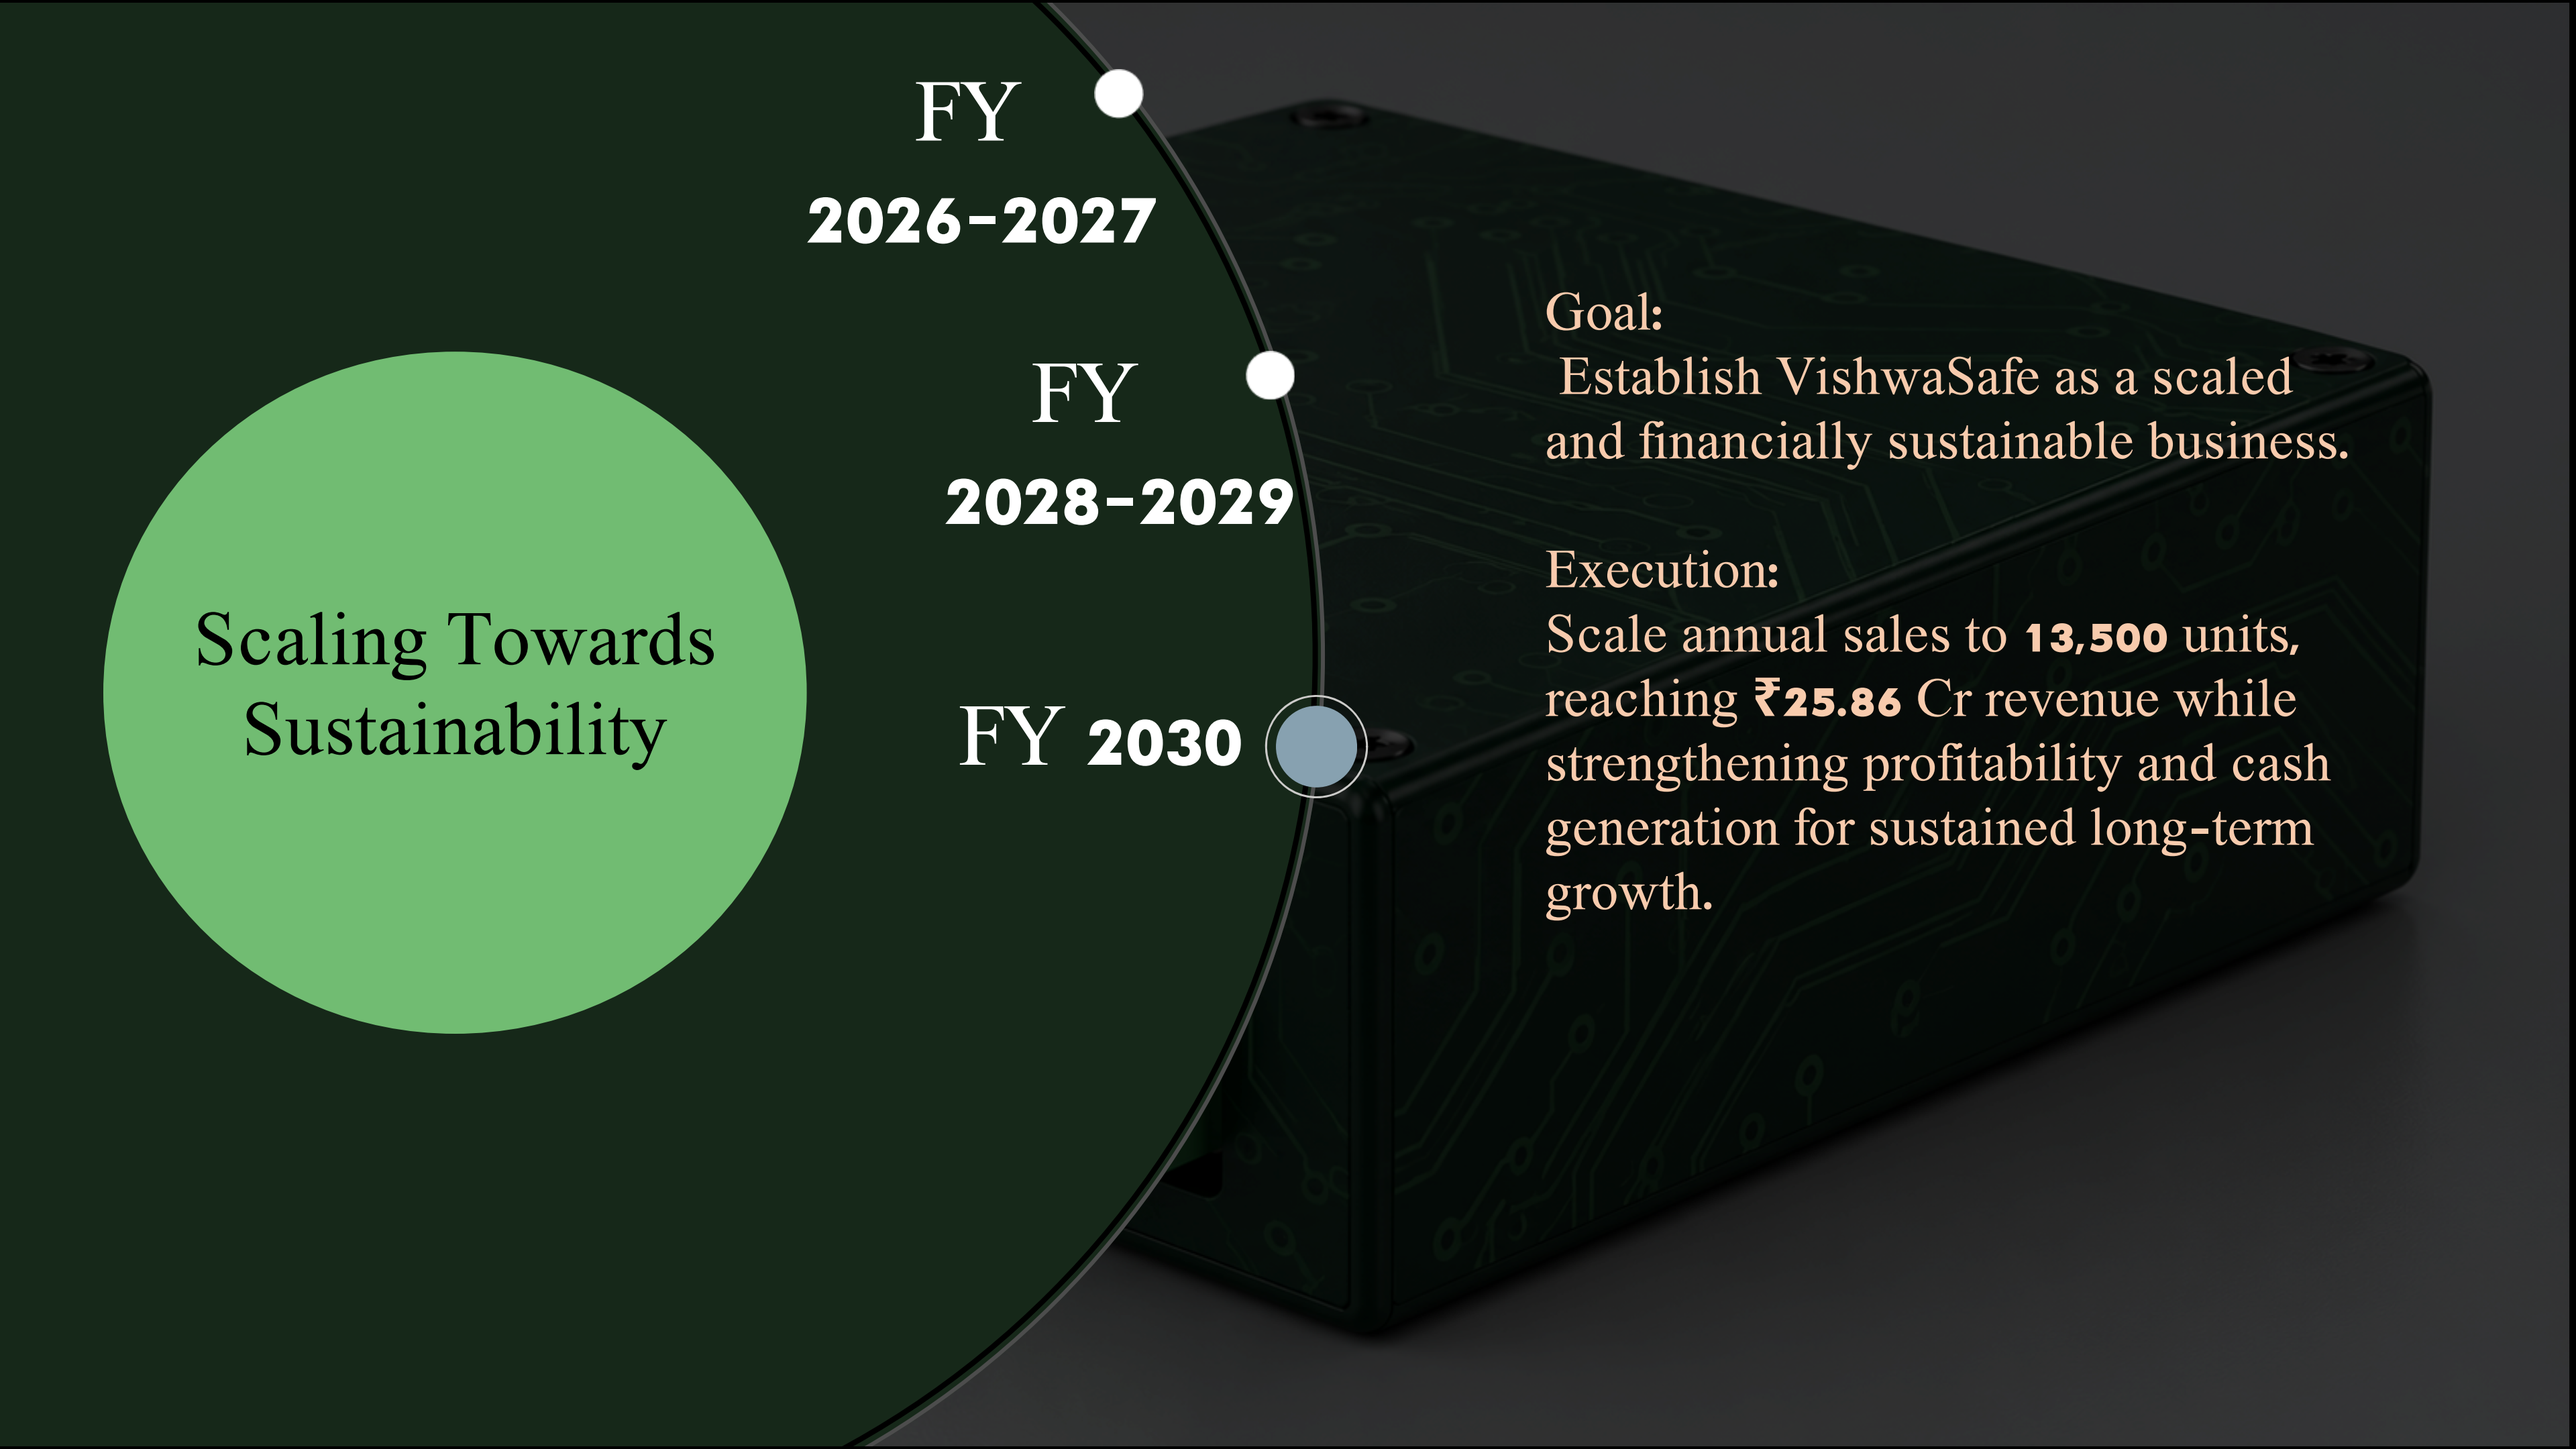


Scaling Towards Sustainability

FY **2026-2027**

FY **2028-2029**

FY **2030**



Goal:
Establish VishwaSafe as a scaled and financially sustainable business.

Execution:
Scale annual sales to **13,500** units, reaching **₹25.86** Cr revenue while strengthening profitability and cash generation for sustained long-term growth.

Deep Dive Topic

RISK & RESILIENCE STRATEGY

Critical Risk:
Dependence on a single PCB supplier in Assam exposed VishwaSafe to potential supply delays due to floods and logistical disruptions.

Immediate Mitigation (Diversification):
Dependence on a single PCB supplier in Assam exposed VishwaSafe to potential supply delays due to floods and logistical disruptions.

Long-Term Solution (Localization):
Evaluate additional qualified suppliers and assess the feasibility of phased in-house PCB assembly based on production needs and investment.

Deep Dive Topic

FROM RESILIENCE TO ADVANTAGE

Business Model Evolution:
Transitioned from sourcing PCBs exclusively from Assam to geographically diversified procurement by placing orders in Pune.

New Competitive Edge:
Transitioned from sourcing PCBs exclusively from Assam to geographically diversified procurement by placing orders in Pune.

Unlocking New Revenue:
Established a foundation for more reliable procurement, production continuity and future business expansion.
